

WWT / Tanium Summary for Security Operations Platform Solution - RFQ Number DMS-22/23-157

Description of Solution

Florida Agencies will have a Tanium-based Security Operations Platform (SOP) Solution that combines multiple security technologies and tools into a single integrated platform with enterprise-wide visibility to guard against a wide range of security threats. This AI and machine learning enhanced platform aggregates all the agency instances to provide comprehensive visibility and automated processes to quickly detect, investigate and respond to security threats.

Benefits

- Enhance proactive security and mitigate risk with automated hunting, early detection, and rapid investigation and remediation
- Provides mitigation strategies and solutions
- Quickly and easily find unmanaged assets on complex networks
- Rapidly respond to cyber threats with real-time visibility and comprehensive control
- Single console for policy and configuration management at scale anywhere
- Integration capability that enriches external or 3rd party systems with up to the second data from every endpoint
- Gain visibility and control of managed and unmanaged endpoints, regardless of location
- Accelerates system deployment and updating

Products

Tanium stands as the most advanced converged endpoint management platform, encompassing a comprehensive suite of capabilities such as discovery, asset inventory, device management, and powerful risk reduction tools. With its cutting-edge technology and innovative approach, Tanium empowers organizations to gain deep visibility into their endpoints, efficiently manage and secure devices at scale, and effectively mitigate risks across their infrastructure.

By providing a unified platform that combines these critical functionalities, Tanium equips businesses with the tools they need to enhance operational efficiency, strengthen cybersecurity posture, and achieve optimal endpoint performance, making it a leader in the realm of converged endpoint management.

Implementation

WWT's program managers will use a proven methodology to oversee all aspects of the deployment and ensure project success. WWT's cybersecurity engineers will assist with installation and provide operational support and ensure the solution confirms to industry best practices.

Managed Services

Enrollment into the managed services will occur after these solutions are deployed to all end points. Tanium's SOP Platform delivers real-time analysis of security events generated across any agency's entire infrastructure, even in disaster recovery type scenarios.
